ONE HUNDRED FIFTEENTH CONGRESS

Congress of the United States

House of Representatives

COMMITTEE ON ENERGY AND COMMERCE

2125 RAYBURN HOUSE OFFICE BUILDING WASHINGTON, DC 20515–6115

Majority (202) 225–2927 Minority (202) 225–3641

March 31, 2017

General John F. Kelly, USMC, Retired Secretary U.S. Department of Homeland Security 3801 Nebraska Avenue, N.W. Washington, DC 20528

Dear Secretary Kelly:

We seek your assistance in evaluating the management and performance of the Common Vulnerabilities and Exposures (CVE) program, which has become an essential service for modern cybersecurity practices. The program provides a reliable, standardized mechanism for describing information technology and cybersecurity vulnerabilities. Recent reports indicate the program may not be keeping up with the increasing vulnerabilities and related risks inherent in modern cybersecurity.

Established in 1999, CVE was developed, implemented, and is currently maintained by the MITRE Corporation with funding from the Department of Homeland Security. The program accepts reports of vulnerabilities in information technology products, verifies and validates the vulnerabilities, and then assigns a unique "CVE number" to each one. Once a vulnerability receives a CVE number, organizations are able to examine their systems for the vulnerability, remediate it if found, share information with partners and their customers about the impact of the flaw, and develop strategies and techniques for protecting the larger ecosystem against it and similar vulnerabilities.

Over time, CVE became the basis for additional cybersecurity services; for example, the National Institute for Standards and Technology (NIST) built additional programs on top of CVE to further strengthen and expand upon its capabilities, including the National Vulnerability Database (NVD), the Common Vulnerability Scoring System (CVSS), and the Security Content Automation Protocol (SCAP). As these programs and CVE matured, organizations began to leverage them as external "add-ons" to their security efforts and to integrate them directly into

Letter to The Honorable John F. Kelly Page 2

cybersecurity standards, policies, and tools.² In short, CVE and its derivative programs have become the common language threaded through most cybersecurity products and services. CVE is critical to effective cybersecurity practices, the absence of which would severely impair the ability to address rapidly and effectively security vulnerabilities in the products and services across all sectors of American commerce.

In spring 2016, press reports revealed complaints that requests for CVE numbers for vulnerabilities reported to MITRE either were taking several weeks or months to process, or were going unanswered.^{3,4} In addition, some individuals and organizations seeking CVE numbers were told that their vulnerabilities were "out of scope" for CVE, and had their vulnerabilities rejected from the program.⁵ Over the past year, MITRE has made several updates to the CVE program. While these changes have improved the functioning of the system, and MITRE's engagement with its stakeholder community has greatly increased, both the larger community and MITRE agree that significant work is necessary to ensure timely coverage of affected products and services.⁶

The explosion of connected devices and services that has been associated with the CVE program's shortcomings, while rapid, did not occur overnight. In light of this, we seek to understand how MITRE and the CVE program failed to anticipate and prepare for this growth in demand for its services and what more may be done to ensure this program can more effectively serve its essential mission.

As the contracting agency for CVE, DHS is responsible for ensuring that the program operates effectively, in accordance with the terms of the contract. Therefore, and pursuant to Rules X and XI of the U.S. House of Representatives, we request the following documents and information to assist the Committee in understanding the recent CVE issues and what steps DHS is taking to ensure the program successfully adapts to current and future conditions:

- 1. Please provide a description and copy of all contracts associated with the CVE program, including any changes, amendments or associated modifications.
- 2. Please provide a timeline of the actions taken by DHS to oversee the management or fulfillment of the contract beginning from January 01, 2011 to the present.

² See e.g., NIST's Special Publication 800-53, the standard for federal government cybersecurity; the Payment Card Industry's Data Security Standard, the standard for organizations that process credit card data; the Health Insurance Portability and Accountability Act, the standard for healthcare organization cybersecurity; the Critical Infrastructure Protection Standards, the standard for electric sector cybersecurity; and the NIST Cybersecurity Framework all either directly or indirectly refer to CVE, CVSS, and NVD.

Letter to The Honorable John F. Kelly Page 3

3. Please provide a description and copies of any analyses of the CVE program completed by or for DHS, including, but not limited to, analyses examining the performance of the program, resource needs, and future requirements to maintain an effective and stable program, if they exist.

We appreciate your assistance with these requests and ask for your response no later than April 13, 2017. An attachment to this letter provides additional information about responding to the Committee's request. If you should have any questions, please contact John Ohly or Jessica Wilkerson of the Committee staff at (202) 225-2927.

Sincerely,

Greg Walden
